

Osaki Threat Intelligence Report

Questions, Answers & Evidence

Q1

Determining the creation time of the malware can provide insights into its origin. What was the time of malware creation?

Answer: 2022-09-28 17:40

History ⓘ

Q2

Identifying the command and control (C2) server that the malware communicates with can help trace back to the attacker. Which C2 server does the malware in the PPT file communicate with?

Answer: <http://171.22.28.221/5c06c05b7b34e8e6.php>

Contacted URLs (2) ⓘ			
Scanned	Detections	Status	URL
2026-08-03	14 / 92	-	http://171.22.28.221/5c06c05b7b34e8e6.php
2025-06-23	11 / 97	-	http://171.22.28.221/9e226a84ec50246d/sqlite3.dll

Q3

Identifying the initial actions of the malware post-infection can provide insights into its primary objectives. What is the first library that the malware requests post-infection?

Answer: sqlite3.dll

Network Communication ⓘ

HTTP Requests

- +  GET http://171.22.28.221/9e226a84ec50246d/sqlite3.dll 200
- +  POST http://171.22.28.221/5c06c05b7b34e8e6.php
- +  GET http://171.22.28.221/9e226a84ec50246d/sqlite3.dll

Q4

By examining the provided [Any.run report](#), what RC4 key is used by the malware to decrypt its base64-encoded string?

Answer: 5329514621441247975720749009

Malware configuration

Stealc

(PID) Process	(3484) VPN.exe
C2	http://171.22.28.221/5c06c05b7b34e8e6.php
Keys	
RC4	5329514621441247975720749009
Strings (298)	" & del "C:\ProgramData*.dll" & exit %08IX%04IX%lu

Q5

By examining the MITRE ATT&CK techniques displayed in the [Any.run sandbox report](#), identify the main MITRE technique (not sub-techniques) the malware uses to steal the user's password.

Answer: T1555

Hide all

Danger 9

T1070.004 File Deletion (1)

Starts CMD.EXE for self-deleting

Loads dropped or rewritten executable

T1555.003 Credentials from Web Browsers (1)

Steals credentials from Web Browsers

T1552.001 Credentials In Files (3)

Steals credentials from Web Browsers

Steals credentials

Actions looks like stealing of personal data

Q6

By examining the child processes displayed in the [Any.run sandbox report](#), which directory does the malware target for the deletion of all **DLL** files?

Answer: C:\ProgramData

Malware configuration

Stealc

(PID) Process	(3484) VPN.exe
C2	http://171.22.28.221/5c06c05b7b34e8e6.php
Keys	
RC4	5329514621441247975720749009
Strings (298)	" & del "C:\ProgramData*.dll" & exit
	%08IX%04IX%lu

Q7

Understanding the malware's behavior post-data exfiltration can give insights into its evasion techniques. By analyzing the child processes, after successfully exfiltrating the user's data, **how many seconds does** it take for the malware to **self-delete**?

Answer: 5
